The two lines on the graph above best represent which of the following combinations of travel behavior in a metropolitan area of 2 million population?

- A. Transit and private automobile trips
- B. Weekday and weekend trips
- C. All work and nonwork trips
- D. Office and retail generated trips

The two lines on the graph above best represent which of the following combinations of travel behavior in a metropolitan area of 2 million population?

- A. Transit and private automobile trips
- B. Weekday and weekend trips
- C. All work and nonwork trips
- D. Office and retail generated trips

The next two questions refer to the following information. The desirability and feasibility of a proposed shopping center are to be evaluated. The primary concerns are that conditions of the city zoning ordinance be met and that the project be a profitable venture. The developer owns a 30-acre parcel and proposes to construct a 250,000-square-foot leasable area with 1,300 on-site parking spaces. The shopping center will serve a trade area that contains 20,000 households. The average household income is \$12,000. The shopping center will have a 50:50 split of square footage between convenience and shopper's goods.

Which of the following would be appropriate in a shopping center of this size?

- A. A major grocery and a drug store as prime tenants
- B. Either a department or discount store as the anchor tenant
- C. Three department stores of approximately the same size
- D. A series of smaller stores rather than an anchor tenant

The next two questions refer to the following information. The desirability and feasibility of a proposed shopping center are to be evaluated. The primary concerns are that conditions of the city zoning ordinance be met and that the project be a profitable venture. The developer owns a 30-acre parcel and proposes to construct a 250,000-square-foot leasable area with 1,300 on-site parking spaces. The shopping center will serve a trade area that contains 20,000 households. The average household income is \$12,000. The shopping center will have a 50:50 split of square footage between convenience and shopper's goods.

If an average of 400 square feet is needed to accommodate each parking space and associated driveways, what would be the appropriate acreage of the blacktop area of the site?

- A. Less than 10 acres
- B. Between 10 and 15 acres
- C. Between 15 and 20 acres
- D. More than 20 acres

Practice Questions
